- item 5

Mobile Engineer, Atomic Robot: Cincinnati, Ohio — 2016 - 2018

- **Client: Kroger Technology** - Android, Kotlin, Java
    - Rebuilt the registration flow for the Kroger App, allowing users to create new accounts, select a preferred store, and add a loyalty card.
    - Worked in conjunction with 84.51° to replace the App Feedback survey page with a new survey page powered by Qualtrics with no lapse in availability for users.
- **Client: PLXIS** - JUnit, DevOps, Groovy
    - Built a simulator in Groovy using TDD to develop a connection for a new payment provider on the PLXIS payment gateway. The gateway processed an average of 20M transactions per day under VISA, Mastercard, AMEX.
    - Investigated anomalies in real time on the PLXIS platform using Splunk.

Mobile Developer (Summer Intern), Pygraphics: Argyle, Texas — Summers 2014 - 2015

- Developed initial version of a 3D Marching Band Drill app for Android and iOS using Unity3D and Xcode respectively.
